

SPEED INJECTED, MAXIMUM FORGIVENESS WITH A DRAW

“The M6 D-Type driver delivers the incredible performance of the M6 driver in a more draw-biased and easy-to-launch package. This driver is engineered to help golfers avoid the right side of the golf course and hit it farther off the tee than they ever have before”

Tomo Bystedt | Senior Director Product Creation

INJECTED FOR SPEED™

- Every head is individually speed tested and injected with tuning resin to optimize COR across the entire face
- Speed Injection process is designed to deliver maximum ball speed and distance every time for every player

TWIST FACE™

- Revolutionary new face curvature with a corrective face angle on off center hits, engineered to reduce side spin and deliver straighter shots
- Twist Face provides more loft in the high toe and less loft in the low-heel to produce more consistent spin where golfers commonly mis-hit

AERODYNAMIC CARBON SOLE DESIGN WITH "INERTIA GENERATOR"

- Sleek aerodynamic shaping provides increased clubhead speed for more distance
- Full carbon sole construction allows for increased discretionary mass placed low and back for maximum MOI and low CG
- Inertia Generator stores 46g of weight low and back for maximum forgiveness

DRAW-BIASED DESIGN

- The two-tone crown cosmetics have been altered to make the face angle appear more open, resulting in a more closed face at impact

DRAW-BIASED, EASY TO LAUNCH
